

Requirements

Personal Finance & Portfolio Risk Engine | `finance_engine.py`

1. System requirements

Item	Requirement
Python	3.8 or newer
Operating system	Windows, macOS or Linux
Interface	Terminal or IDLE (run with F5)
Internet	Needed only for the risk engine (downloads prices from Yahoo Finance)
Disk space	Under 1 MB for the app and its saved data file

2. Python packages

Package	Minimum version	Used for
numpy	1.21	Weights, percentiles, matrix maths
pandas	1.3	Price tables, returns, correlation
yfinance	0.2.40	Downloading historical stock prices

The health check and the data editor work without these packages. Only the risk engine needs them.

3. Built-in modules (nothing to install)

`copy`, `json`, `os`, `re`, `sys`, `statistics` (`NormalDist`)

4. Installation

Install everything with one command:

```
pip install -r requirements.txt
```

Or install the packages directly:

```
pip install numpy pandas yfinance
```

5. Running the app

```
python finance_engine.py
```

Or open the file in IDLE and press F5.

6. Troubleshooting

Problem	Fix
<code>ModuleNotFoundError</code>	Run the pip install command above, using the same Python that runs the app
No data for a ticker	Check the symbol on Yahoo Finance. Non-US stocks need a suffix, e.g. <code>RELIANCE.NS</code>
Download error	Check your internet connection and try again later
Data file unreadable	Delete <code>finance_data.json</code> to start fresh with defaults
